### **Description**

SOPHIMED is a private specialized center owned by Magdalena Tomczyk, PhD. The center is primarily focused on conducting clinical trials in neurology and offering outpatient services. We cooperate with many specialists and local laboratory on the basis of the signed agreement. Depending on the sponsor's requirements, we can perform MRI scan using 1.5T or 3T field strength.

### **Research Center**

SOPHIMED is a team of people with more than 10 years of experience in clinical trials who keep their skills and knowledge up to date and uphold the standards of their professional code. We specialize in multiple sclerosis clinical trials, although we conduct trials involving various other neurological disorders.

Our principal investigator, Magdalena Tomczyk, PhD, has been working as a medical examiner and treating physician and has attended numerous training courses in this area and obtained ICH and GCP certificates.

Anna Pamuła, PhD is a coordinator and a team member with 28 years of clinical experience and 16 years of experience in the area of clinical trials. It is her responsibility to keep paper and electronic Case Report Forms and current documentation up to date and liaise with the central laboratory (take samples for examination, perform ECG, holter ECG and perform various tests, such as MFCS, PASSAT and SDMT to name a few). She cooperates with the MRI Assessment Center (making sure that MRI examination was performed on-time and shipping them electronically), drug expenditure, dispensation and administration, keeps record of IVRS appointments, solves queries, orders laboratory kits, cooperates with Clinical Research Associates and maintains contact with patients. Patients are recruited from hospitals, private medical practices and other health care facilities which we cooperate with.

### **Amenities**

Our center has a fully furnished examination and treatment office, CRA office and protected space for archiving the documentation. A positive opinion concerning our center was issued by the sanitary-epidemiological station SANEPID.

Our offices are equipped with haematocrit centrifuges, refrigerator with a freezer (up to -30°C with R485 interface), BOSO device for RR measurements, weighing machine, xerox machine, fax, scanner and wireless Internet connection.

### **Summary**

SOPHIMED is focused on conducting clinical trials because our main goal is to provide patients with the access to most current therapies. Contrary to the public institutions, clinical trials are our main focus, thus we guarantee the highest quality of work, according to the standards set by the Bioethics Committee at Collegium Medicum, Nicolaus Copernicus University, Bydgoszcz, Poland.
